NFL Films
Mount Laurel, NJ

Dear NFL Films Hiring Team,

Music administration is the part of the music industry most people never see, but it is the reason artists and rights holders get paid accurately and on time. I have spent the last year working inside exactly that kind of detail, cataloging placements, verifying cue sheets, and building catalogs against a clock, and I would like to bring that to NFL Films' Original Music Library.

At Position Music, I verified metadata across 50 to 60 NBC Sports cue sheet entries per cycle, ensuring accuracy across music use reporting deliverables for multiple third-party partners, and cataloged over 200 TV, film, trailer, and advertising placements in Excel. I also worked directly inside DISCO, building and categorizing 10 to 20 playlists against creative briefs, which means I already have working familiarity with the kind of music database environment this role depends on.

My graduate research adds a layer of label and publishing context to that hands-on experience. My Carnegie Mellon capstone involved leading executive interviews with Position Music, Beatport, and Rostrum Records on label strategy, catalog management, and publishing structures, which gave me a working understanding of how copyright, royalties, and sub-publishing relationships actually function from the business side, not just the data side.

I want to be direct about two things in the required qualifications. My undergraduate degree is in Information Technology rather than Data Management, Data Analytics, Statistics, or Computer Science specifically, though my coursework included applied data modeling and statistical analysis of audio data for my honors thesis, and my Master's coursework and current AI evaluation work have kept me close to structured data review. Second, I have not worked directly in Power BI. What I can offer is advanced Excel proficiency built on cataloging large, detail-sensitive datasets under deadline, and a demonstrated pattern of ramping up quickly on new systems and tools. I am confident I could become productive in Power BI quickly given that foundation.

I would welcome the opportunity to bring my attention to detail, my music industry research background, and my genuine interest in NFL Films' work to your Original Music Library team.

Thank you for your time and consideration.

Sincerely,
Jabreneé Hussie
